

Kuapa Dwaso Operations Voiceover Script

Timed to sync with screen recordings of the Operations Console

Part 1: Produce Intake Walkthrough

Video Source: *produce intake.mp4* | Duration: 1m 35s

Time Cue: 00:00 - 00:12

Visual: Operations Console dashboard shows today's intakes, expiring batches, and active counts. The agent clicks '+ New Produce Intake'.

Voiceover: "Welcome to the Kuapa Dwaso Operations Console. This is the dashboard where warehouse agents run daily intake and manage stored produce. ="

Time Cue: 00:12 - 00:26

Visual: Step 1: 'IDENTIFY PRODUCER'. Agent searches and selects farmer Osei Andrews, confirming Tarkwa warehouse. Clicks continue.

Voiceover: "First, we identify the producer(which is our farmer) in this case, Osei Andrews—and select the receiving community warehouse. This links the deposit directly to the farmer's account."

Time Cue: 00:26 - 00:35

Visual: Step 2: 'SELECT CROP TYPE'. Agent selects Cassava, sets Grade A, and checks condition tags: mixed sizes, well dried, insect free.

Voiceover: "Next, we enter the crop details. The agent here selects Cassava, grades it and checks off quality tags like 'well dried' and 'insect-free' to establish a clear quality baseline."

Time Cue: 00:35 - 00:56

Visual: Step 3: Intake quantity (500 tubers), shelf life (30 days), daily storage fee (GHS 0.20), and asking/minimum pricing terms are input.

Voiceover: "We then enter the quantity—500 tubers—and specify the storage terms. The system calculates the sell-by date based on a 30-day shelf life. We set a transparent storage fee of 20 pesewas per day and record the farmer's asking price terms."

Time Cue: 00:56 - 01:07

Visual: Step 4: 'PRODUCE PHOTO'. Agent uploads a file. A preview of fresh cassava tubers appears.

Voiceover: "To prevent quality disputes, the agent uploads a photo of the produce as physical evidence. This photo is linked permanently to this specific batch."

Time Cue: 01:07 - 01:15

Visual: Agent reviews 'INTAKE VERIFICATION' screen with all terms summarized, then clicks 'Confirm & Create Receipt'.

Voiceover: "We do a final review of the intake terms with the farmer, confirming the storage rates and asking prices, and click 'Confirm & Create Receipt' to write the transaction to our ledger."

Time Cue: 01:15 - 01:23

Visual: 'Receipt Created Successfully' screen appears showing receipt code WH-WHTKW001-779443.

Voiceover: "The platform generates a unique, tamper-proof Receipt Code. Simultaneously, an SMS notification containing the receipt details is sent to the farmer's phone."

Time Cue: 01:23 - 01:35

Visual: Agent navigates to 'Inventory' tab, expands the new Cassava batch, and clicks 'List for Sale'. The status changes to 'AVAILABLE'.

Voiceover: "Finally, we navigate to our active inventory. Here is our Cassava batch. The agent clicks 'List for Sale' to instantly publish this verified warehouse stock to our buyer marketplace, ready for orders."

Part 2: Change Status of Inventory

Video Source: *chnage status of inventory.mp4* | Duration: 33s

Time Cue: 00:00 - 00:05

Visual: Inventory list view. Agent selects the Maize batch for Osei Andrews (150 bags, status AVAILABLE).

Voiceover: "In this clip, we'll look at how we manage inventory status. The agent goes to the inventory list and opens the active Maize batch for Osei Andrews."

Time Cue: 00:05 - 00:18

Visual: Agent clicks 'Change Status', selects 'withdrawn' from dropdown, and types reason: 'Farmer decided to withdraw'.

Voiceover: "If a farmer decides to take back unsold crop, the agent clicks 'Change Status,' changes the status to 'withdrawn,' and types in the reason for the audit trail."

Time Cue: 00:18 - 00:33

Visual: Agent clicks 'Commit Status'. Timeline updates with 'Status changed to withdrawn: Farmer decided to withdraw'.

Voiceover: "Once committed, the system calculates any outstanding storage fees, updates the status, and logs a permanent entry in the batch history timeline. This ensures total audit accountability at every step."
