

Kuapa Dwaso Presentation Script

Landing Page & Product Overview Presentation (2-Minute Cut)

Slide 1: Brand & Logo Concept

[Visual: Display the Title Slide (logo-presentation.html) showing the centered green logo with 'Kuapa Dwaso' below it]

Speaker:

"Hello everyone. Kuapa Dwaso—which translates to **'Farmer's Market'** in Akan—is a warehouse-based platform for produce aggregation, inventory, sales, and dispatch.

This logo represents a concept we call **'Geometric Aggregation.'** On the far left, you see small, individual producer nodes—our smallholder farmers. They converge into intermediate community warehouses in the middle, which ultimately consolidate into a large, aggregated bulk supply on the right.

This design directly reflects the field insights that shaped our entire product direction. During our visits with farmers and traders in Tarkwa, we learned that farmers were carrying all the risk. They were transporting perishable crops to the city on speculation, with no confirmed buyers, leaving them with zero bargaining power and exposing them to heavy spoilage."

Slide 2: The Landing Page & Warehouse Model

[Visual: Actively scroll and show the Kuapa Dwaso Landing Page]

Speaker:

"We designed our landing page with a product philosophy of **radical restraint and high-trust documentation**.

Instead of a simple digital matching app, our landing page shows how we establish physical warehouses as trust points. Farmers store produce locally, and we only dispatch bulk transport once orders are confirmed by buyers.

The landing page clearly outlines this flow for three key roles:

1. The **Farmer Portal**, where farmers track their storage fees and payouts.
2. The **Warehouse Agent Dashboard**, where agents grade and record produce intake.
3. The **Buyer Console**, where traders purchase verified, physical inventory.

Let's now log into the platform and see this flow in action."
